

ABSTRACT

MEMORY GAME - INKOOP

I've done this project in 24 hours of time and it consists of 2 HTML pages 1 JS page and 1 CSS page

It's done in the basic **HTML** page and there is no mention of use in "**react.js**" only.

Games.html is a main page in which it generates a random number, after a 10 seconds of timeout it redirects to Check.html

Check.html is used to enter the number and it validates , how many digits are matched with a generated random number

This is the ***Memory Game***.
